

2013... EADM allows you to capitalise on your RMF and CMF reports and gives you expertise on z OS DASD... It is very easy with EADM.

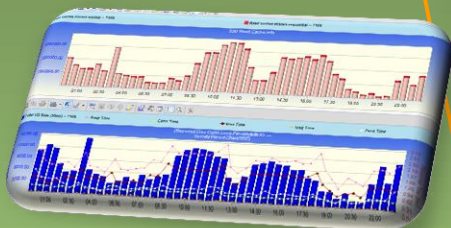

Cache Tracks misses Read/Write, your application needs more tracks to improve the throughput

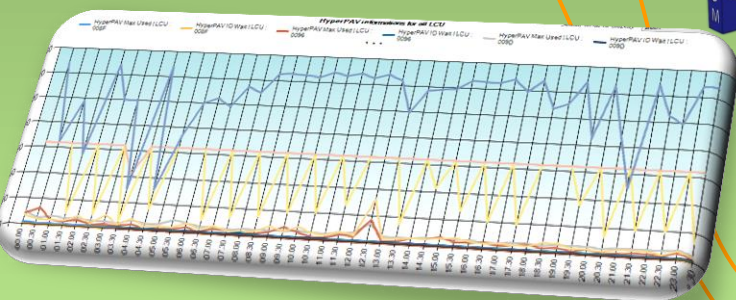

Your application is not optimised z HPF can give it a boost

Cache Read misses behavior your application should read from the cache not from the disk.

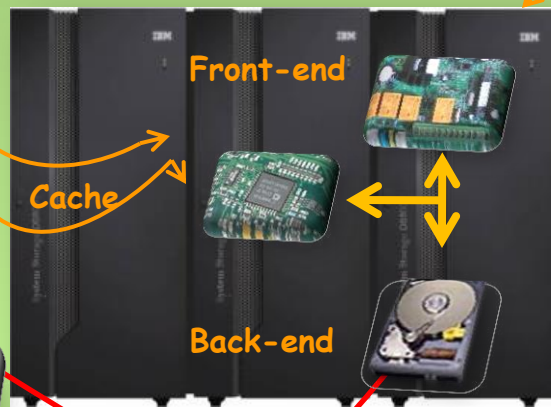

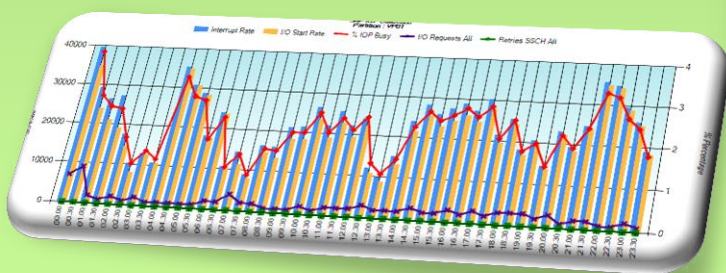

Do you have enough 'allias PAV' ? It is very easy with EADM

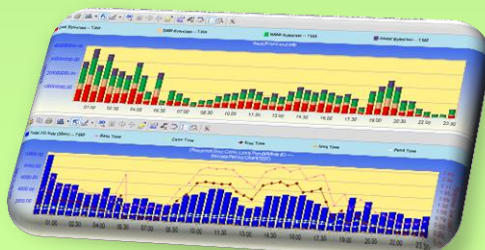

Behavior tracability of your I/Os is characterised by 4 components that prove the smooth running of your software applications

Do you know your '% IOP SAP busy' ? It is very easy with EADM

Front-end and Back-end behavior are today the most important indicators to know if your software applications are benefiting from the recent jump forward of z OS DASD technology.
