

2010... This year I would like to simplify my SLA with RMF CMF that I already have in conjunction with EADM

The years pass and don't look alike, some years the IT budgets are smaller and your purchasing Manager asks you for a simple report about I/O z OS Storage performance which is AVAILABLE 24H/7. As all client z OS you already have RMF or CMF.

EADM doesn't need to replicate standard RMF or CMF files to provide you with the essential on the SLA topic performance I/O z OS. EADM is designed to function automatically and to send you an' email ' about the state of performance each morning before 9:00 am, which will reflect the total quality for an IT system.

Our customers ,who have been using our EADM EAMC EATM Software suite for more than 6 years, are our best advertisement.
