

Productivity gains in the Mainframe Storage DS8900 environment.

Yesterday I did not have time, Today I am very busy and tomorrow I have 4 meetings

With the new needs of companies, your activity as a manager of Disk Tape z OS storage spaces will be more and more important and to this important activity you will have to answer more and more quickly to questions from users of z OS Storage spaces ( Upgrade, I/O performance, Calendar performance in the event of an increase in I/O loads for new applications, limits not to be exceeded, the busiest days, repetition of problems, etc..... Following retirements z OS I/O Performance Experts you will have to find solutions to help you in your daily tasks.

Our Software **EADM** application will help you, **EADM** will automatically read all your RMF and CMF reports from each LPAR in your z OS system and tell you which days are causing performance issues, which of the 7 days of the week are who to watch, when there are problems and why. In summary, with **EADM** it is simple and effective.
